

New generation Cyclone products regroup static and dynamic net play with revolutionary Oxygen Series under one banner. All components meet or exceed CSA and ASTM guidelines on playground equipment.

Cyclone uses nylon core cable from 5/8" to 7/8" in diameter. Each cable consists of 6 galvanized steel strands simultaneously wound with a U.V. stabilized polyamide around the nylon core. The cable mechanical resistance varies between 9000 and 21000 lbs depending on cable diameter while still remaining flexible, hence limiting the potential for fall injuries. Chains used by Cyclone have small links specially designed to avoid small fingers from getting caught while providing adequate mechanical resistance for safe play.

### Twister Series

The Twister series really distinguishes itself from conventional playground equipment. Not only is it attractive and impressive for its climbing possibilities, but with its pivoting feature, kids love it even more. Its rotating mechanism, unique to Cyclone, requires no oil, grease or any other similar product. The product will turn even when loaded to full capacity and will quickly slow down after the kids stop pushing.

### Blizzard Series

The Blizzard series is distinctive with its exterior steel frame and interior cable netting. The majority of Blizzard products can be installed in one day without a concrete base. Our base frame, unique to Cyclone, lowers installation costs and permits you to relocate your product if needed.

### Triangulum Series

The Triangulum series is a Blizzard with accessories such as individual seats, a central rest area and a roof. The Triangulum is an excellent alternative when working with a tight budget. Like the regular Blizzard products, the Triangulum can be installed in one day without a concrete base.

### Tornado Series

The Tornado series is characterized by its interior central mast and its exterior cable netting. The concept is quite simple: a gigantic climbing structure with a minimal fall height. With its particular geometrical shape, the users can never fall directly to the ground. You get the attraction of a large climbing structure with the safety of a small one.

### Accessories

Cyclone products can be accessorized in several ways. Ladders, seats, bridges and other items can really make your Cyclone net distinctive and add even more play value to your investment. Take the time to look closely at the different possibilities. Examine the icons, they will tell you which accessories may be matched to your playground structure.

### Hurricane Series

The Hurricane series is characterized by its exterior steel arch and its swinging basket underneath. Hurricane swings may be used by more than one user at the same time. Hurricane is available with 1, 2 or 3 baskets.

### Oxygen Series

The revolutionary Oxygen series combines unique use of space and components asymmetry. Oxygen series is built tough thus allowing the designer to integrate a product with a very high level of play value even in areas with high levels of vandalism.
